

AmpliPhi Biosciences to Present Clinical Case Series Data at IDWeek 2018

*Professor Jonathan Iredell to present data from AmpliPhi Biosciences' ongoing expanded access program for bacteriophage product candidates AB-SA01 (targeting *S. aureus*) and AB-PA01 (targeting *P. aeruginosa*)*

SAN DIEGO--([BUSINESS WIRE](#))--AmpliPhi Biosciences Corporation (NYSE American: APHB), a clinical-stage biotechnology company focused on precisely targeted bacteriophage therapeutics for antibiotic-resistant infections, today announced that clinical case series data from the company's expanded access program for its two investigational bacteriophage therapeutics, AB-SA01 and AB-PA01, will be presented in an oral abstract session "Novel Therapies for Superbugs" at IDWeek 2018, being held October 3-7 in San Francisco.

Details of the oral abstract session are as follows:

Title: Safety and Efficacy of Bacteriophage Therapy: Analysis of Clinical Case Series Data

Oral Abstract Session: Novel Therapies for Superbugs

Abstract number: 1642

Date/Time: Friday, October 5, 2018, 2:45 p.m. PDT

Location: Room S 158

Presenter: Prof. Jonathan Iredell, Critical Infectious Diseases, Westmead Hospital and Critical Infection, Westmead Institute for Medical Research, Sydney, Australia

About AmpliPhi Biosciences

AmpliPhi Biosciences Corporation is a clinical-stage biotechnology company focused on treating antibiotic-resistant infections using its proprietary bacteriophage-based technology. AmpliPhi's lead clinical stage product candidates, AB-SA01 and AB-PA01, target multidrug-resistant *Staphylococcus aureus* and *Pseudomonas aeruginosa*, which are included on the WHO's 2017 Priority Pathogens List. Phage therapeutics are uniquely positioned to address the threat of antibiotic resistance as they can be precisely targeted to kill select bacteria, have a differentiated mechanism of action, can penetrate and disrupt biofilms (a common bacterial defense mechanism against antibiotics), are potentially synergistic with antibiotics and have been shown to restore antibiotic sensitivity to drug-resistant bacteria. For more information visit www.ampliphibio.com.

About Bacteriophages

Bacteriophages, or more simply "phages," are the natural predators of bacteria and are thought to be the most abundant life form on earth. Phages have evolved an incredible diversity of strains that typically prey upon just a few closely related strains or species of bacteria, enabling phage therapies to precisely target pathogenic bacteria while sparing the beneficial microbiota. Phages can infect and kill bacteria, whether they are antibiotic-resistant or not, and even when they have formed protective biofilms.
